Intercon 1 Releases Industrial-Rugged Cables for the Toshiba IK-TU51 3CCD Remote Head Camera

BAXTER — The Intercon 1 division of Nortech Systems, Inc. (Nasdaq: NSYS) has formally released its new Remote Head Cable product series, the **RHC23**. This new line of products has been tested and approved by Toshiba for use with the new **IK-TU51** 3CCD camera. The IK-TU51 camera is said to be Toshiba's first 3CCD Remote Head Camera offered with digital output and either 1/3 inch or 1/2 inch image sensors.

Intercon 1 is now supplying its 'Industrial-Rugged' (**IIR**) version of the product with either straight or right-angle overmolded connector termination. Right-Angle molded ends will be produced in the standard 'right', 'left', 'up', or 'down' configurations or as a custom at any degree of rotation.

Ideal for demanding commercial and industrial applications the RHC23 assemblies are EC shielded and produced with Intercon 1 cable that utilizes strengthened tinned cadmium bronze wire (TCB) conductors. Use of TCB material increases both cable tensile strength and flex life.

Three lengths have been approved and are in production. They are equivalent in length to Toshiba #'s EXC-T503, EXC-T506, and EXC-T510. Contact Intercon 1 Sales @ intercon@nortechsys.com for additional data.
