CAMERA LINK RIGHT-ANGLE INTERNAL ASSEMBLIES

Baxter, Minnesota -- The Intercon 1 division of Nortech Systems, Inc. (Nasdaq: NSYS) announces the release of shielded flat cable Right-Angle Feed-Thru internal assemblies. Designed and tested for internal Camera Link camera-to-panel use these plug-molded Low Profile assemblies reduce the space needed behind a camera for mounting in tight spaces or inside cabinets.

The unique 'feed-thru' assembly design is readily available in the standard 8-inch cable length, which is perfect for most typical applications. With a height of less than 19 mm these PVC over molded plug assemblies provide the lowest profile right-angle Camera Link connection available. Stainless steel Philips head screws ensure positive retention between the connector and camera. Camera Link mating length jackscrews are factory installed in the panel-mount receptacle.

For applications requiring increased retention between the cable and receptacle connector an optional Epoxy filler between the cable and receptacle plastic housing is available. Further product details, catalog data and pricing information is available from Intercon 1 Customer Service in Baxter, Minnesota @ 800-237-9576.
